

ION NETWORKS ANNOUNCE NEWEST IN LINE OF SECURE APPLIANCES

SOUTH PLAINFIELD, N.J.-(BUSINESS WIRE)-JULY 19, 2005 – ION NETWORKS, INC. (OTC:IONN.OB) a leading provider of solutions that secure access and administration to a wide variety of devices operating in voice and data networks, has announced the availability of the newest in its line of secure appliances, the SA5600. The SA5600 delivers the highest level of control, audit and monitoring where secure, remote access is required for device maintenance and support. With the greater demand placed on enterprises to meet compliance security objectives due to Sarbanes-Oxley, Gramm-Leach-Bliley, HIPAA and other legislation, the risk of failing to address these security requirements has risen dramatically. Today, the average loss due to a breach in security through unauthorized access now costs an average \$300,000 per incident. ION's new SA5600 is an effective part of the solution helping CIO's and CSO's address many of their IT security issues.

ION SA5600 SERIES MITIGATES RISKS, ENSURES CONTROL, AND HELPS MEET COMPLIANCE

The SA5600 eliminates passwords with the use of embedded multi-factor authentication. It delivers end-to-end encryption when technicians require secure remote administrative access to a device. An organization can control where, when and how a technician accesses devices found on its data and voice networks with a high level of granularity. All access is now auditable through activity and keystroke logs, which can be maintained on the SA5600 or in a central database.

"The SA5600 series offer's organizations an affordable secure access solution. It provides not only the auditing necessary to meet compliance, but also delivers the level of security and control required to effectively manage and maintain voice and data network devices." Said Bill Whitney, CTO for ION Networks "Out of the box, the SA5600 solves the problem of securely managing device administration. It does so with scalability and less IT complexity. The ION SA5600 series is first in its class to deliver this kind of value."

The SA5600 series' offers a powerful combination of robust security, extensive auditing and control, intelligent monitoring of protected devices, and sophisticated self-monitoring, all necessary in today's IT environment.

SECURING VOICE AND DATA DEVICE ACCESS TODAY

Examples where ION solutions are helping organizations meet compliance while reducing risk are in the financial services sector. Today, world leading global financial services companies have deployed ION solutions in order to mitigate the risk of a third party supporting their networks. Managing and maintaining global networks is costly and complex. While third party management makes sense economically, recent legislation demands a high level of control over third-party service providers.

With ION's secure administrative access solutions, enterprises can eliminate unauthorized device access both internally and externally, audit all activity that is performed on their networks, and safely realize the reduction in IT costs through outsourced services.

ABOUT ION NETWORKS

ION, headquartered in New Jersey, designs, develops, manufactures and sells security solutions that protect enterprise network administrative interfaces from improper, unauthorized or otherwise undesirable access from external and internal sources. Founded in 1982, ION's secure access solutions are in use in over 35 countries. For more information please call 908-546-3900 or visit our website at <http://www.ion-networks.com/>
